## **Pool Play Tie Breaking Procedure**

Final pool play standings are determined by win-loss records within the same pool.

### **Tie breaking procedures**

Two teams tied: the tie breaker is who won head to head

### Three or more teams tied:

First, go to point differential and rank teams accordingly (highest differential is first, next is second, etc.). If two teams have the same differential then look at their head-to-head and rank accordingly.

For example, if Team A, B and C all have a 2-1 record then go to point differential. If Team A has a +8 differential and Teams B and C have a +1 differential then Team A is first. Then look at who won between Teams B and C and the winner is second and the loser is third.

If all the tied teams have the same differential then it goes to a coin flip.
